MultiCulturalPlanet

The website platform aims to foster cultural exchange, professional development, and collaboration across a global community. It will act as a bridge between diverse cultures, promoting the sharing of traditions, experiences, and resources.

STAKEHOLDER

Juliano Braga Telles

01. MulticulturalPlanet.com

The project creates a website platform for users to experience a vast array of different cultures. Users will have access to tutorials, classes, and events related to professional development. In addition, users can join social media groups for exclusive access to other professionals. Finally, there will be the ability to sell and buy classes, content and merchandise.

02. Objective

To create a web-based platform designed "to foster cultural exchange, professional development, and collaboration across a global community."

05. Users

- Regular Users (unpaid)
 - Access to free content, events, and news/articles
 - Community engagement tools
- Premium Users (Paid)
 - Access to exclusive educational resources, events etc.
- Content Contributors
 - Tools for submitting articles, videos etc.
 - Collaboration options with other creators
 - Feedback mechanisms and event-hosting capabilities
- Administrators
 - Tools to manage roles, monitor engagement, and content moderation
- External Partners
 - Space for sponsored content and advertisements available

03. Tech Stack

Frontend

- React
- Custom CSS
- Javascript
- HTML

Backend

- Python
- PHP
- PostgreSQL
- MySQL

Deployment

- A2 Hosting
- cPanel
- CloudLinux

04. Key Features

User Registration & Login

- HTML pages and backend logic connect to A2 server
- User data stored via cPanel
- Popup for Premium upgrade implemented

Premium Access & Paywall

- Stripe integration added for secure payments
- Conditional rendering for premium-only content sections

Event Posting & Editing

- Stripe integration added for secure payments
- Conditional rendering for premium-only content sections

Article Posting & Editing

- Upload and display logic developed with file validation
- Moderation tools added for content approval

Discussion Forums

- Forum supports user accounts and CRUD for posts
- Administrators have moderation tools like banning and reporting users

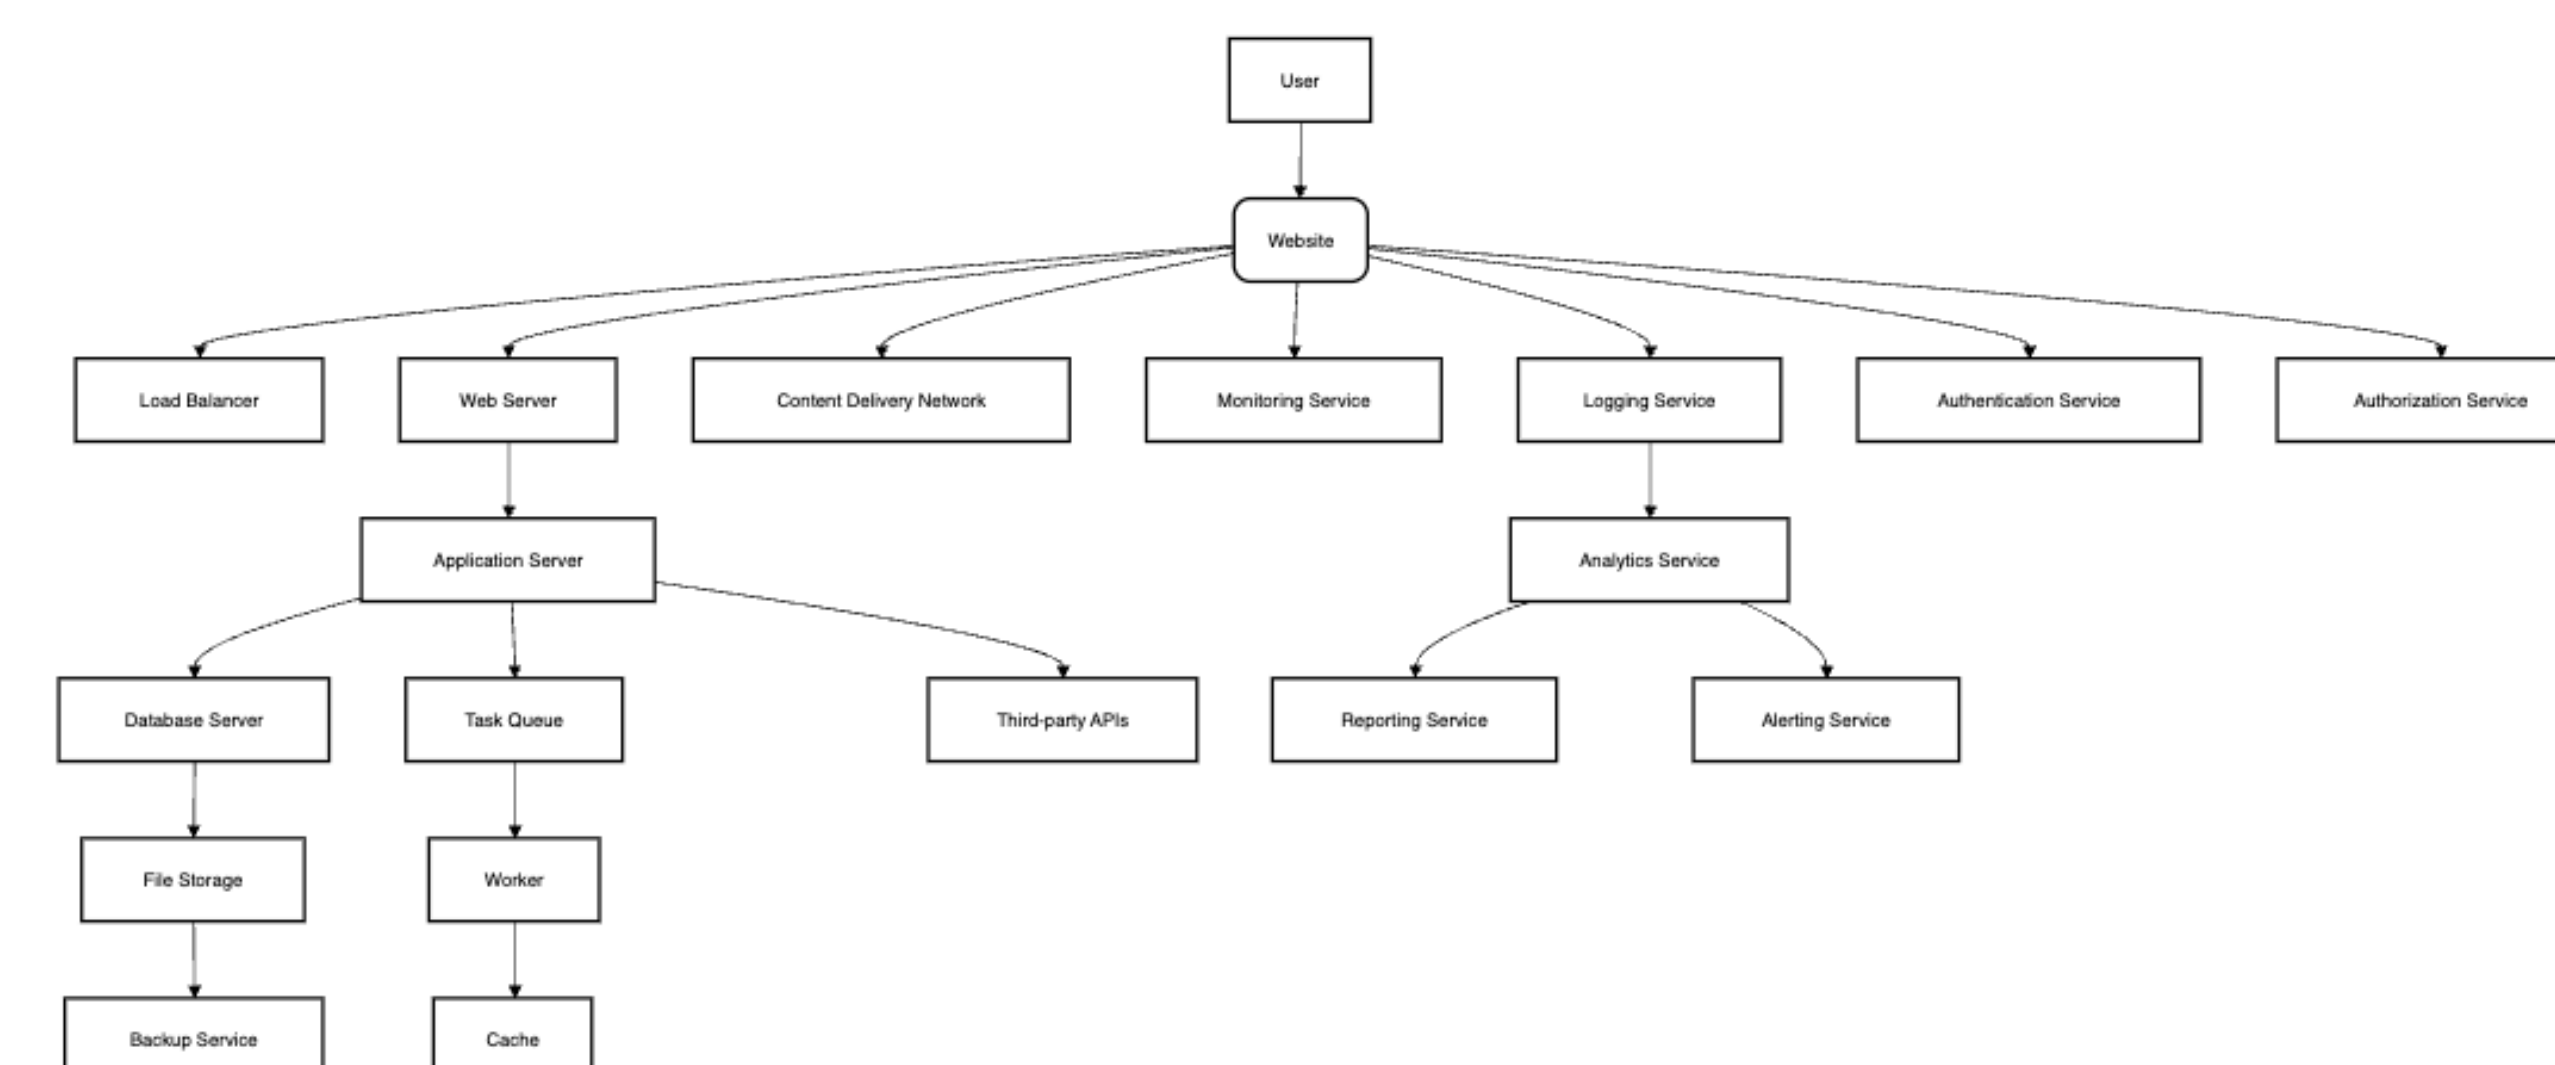

Advertising & Campaign Support

- Homepage space allocated for ads and banners
- Editable sections created for admin announcements

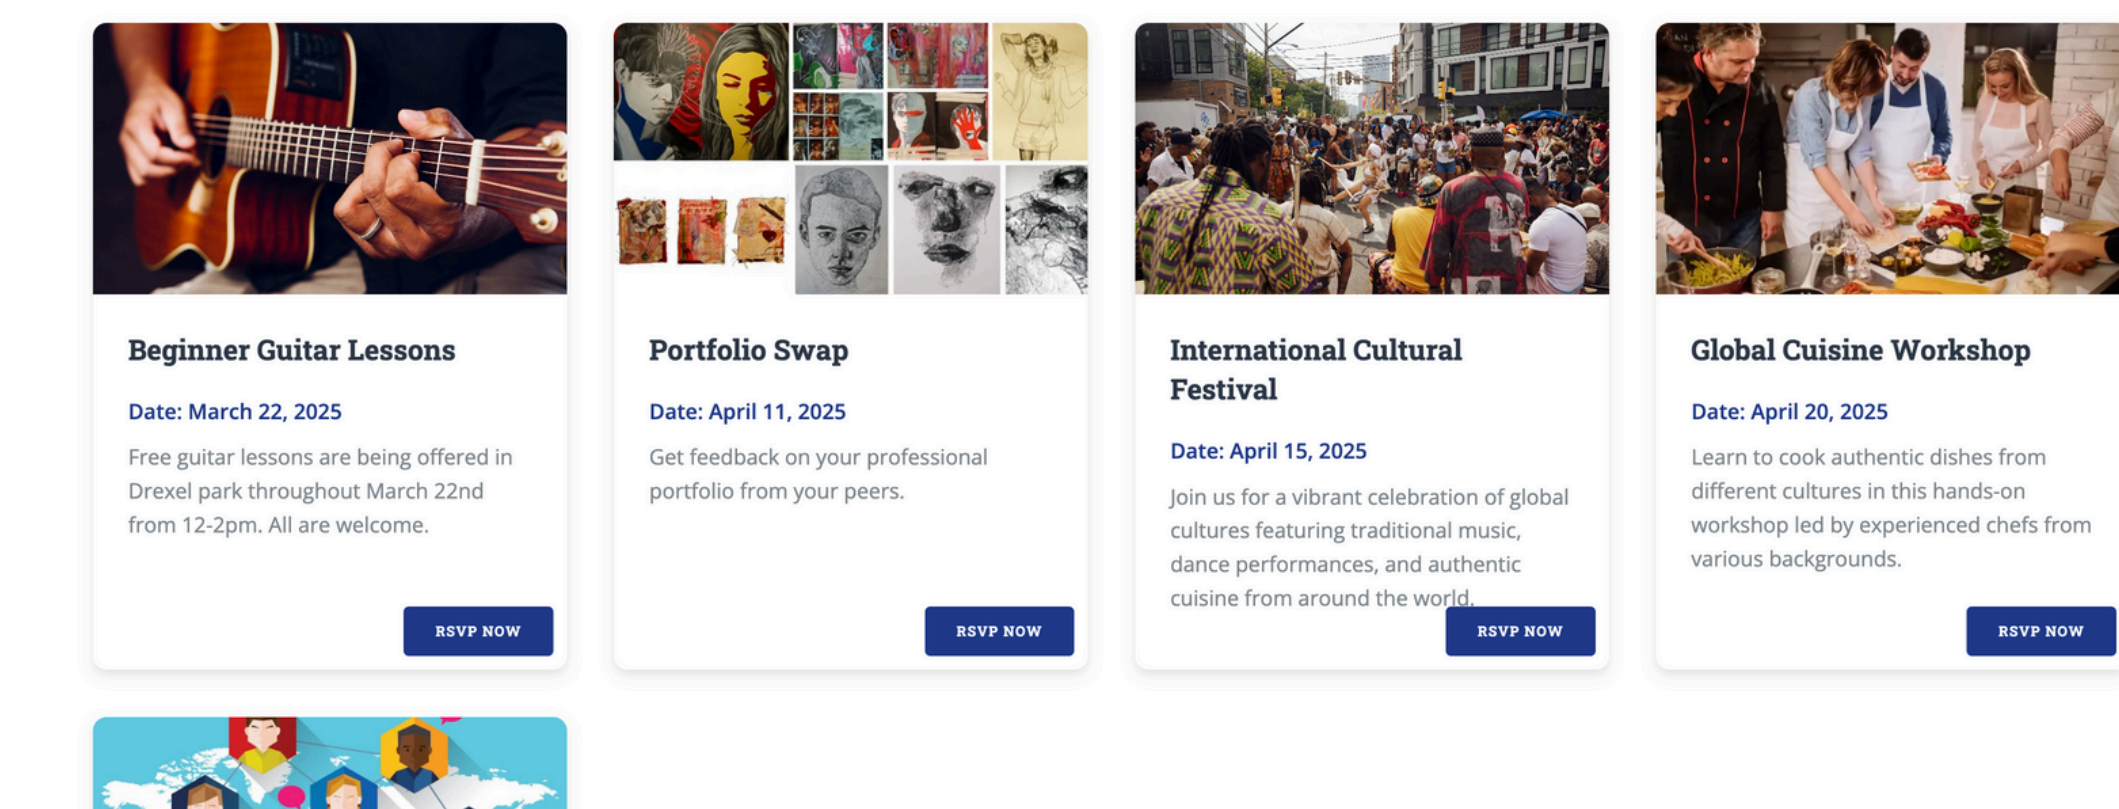

06. The Website

The system is designed using a layered architecture pattern:

- The Presentation Layer:** users can interact with tabs and pages that allow for forum functionality, viewing events, articles, and news, and other free and paid community engagement tools
- The Business Layer:** administrators and partners can post, moderate, remove, and edit content on the website
- The Application Layer:** The website is connected to a backend database that stores user information, and post information, among other relevant data

Events

07. Next Steps

- Continue to develop the UI/UX to ensure the platform remains modern and updated
- Add more crowdfunding features to allow more user involvement and interaction
- Add retention and TTL policies for discussions, events, and articles
